

CoreMax[®] Soil Management

CoreMax[®] is the most advanced soil management program in the market.

Through the use of highly efficient and cost effective smart soil sampling methods, CoreMax provides an accurate picture of field variability by selecting the most ideal soil sampling locations. Through the use of these targeted locations our professionals can accurately extract soil and provide valuable nutrient analysis results.

Recommendations are made by experienced professionals to address differences throughout your field and can be easily turned into field-ready controller files in both traditional and variable rate methods.

For these reasons you as a CoreMax user will be able to manage your field in ways not previously possible or available using other systems. CoreMax helps maximize your focus on agronomy so that you can make better decisions for the future.

Smart sampling custom fit to your field

Field is analyzed to determine the best sampling approach to maximize benefits.

Multi-Sample nutrient analysis and mappings

Soil is extracted from targeted locations within the field and mapped to provide a unique insight.

Custom nutrient recommendations

Custom recommendations are made using the data from your fields to provide powerful solutions.

Site specific nutrient application

Recommendations allow for the ability to make applications within targeted locations in the field.
