

Slice[®]

ADVANCED TISSUE SYSTEMS

Slice[®] is an advanced tissue management system comprised of custom recommendations suited to your farming operation.

Tissue samples are extracted from your field based upon field specific observations. These samples are analyzed by approved labs who are verified to meet strict requirements and quality guidelines to provide the most qualified and consistent results. These results are then processed through an advanced system which accounts for several key variables that affect crop and yield performance.

Upon final analysis your sales representative will deliver the results and findings and will discuss a recommendation that is best suited for your crop. Where other systems leave you with an over simplified and general recommendation, Slice delivers a custom tailored recommendation designed for your crop, your field, and your farm to maximize your investment.

Custom Recommendations

Key products are recommended based on the unique values analyzed from your samples.

Quality Labs

Data is processed using dependable and consistent methods to produce reliable results.

Utilizing Strong Agronomic Principles

Target values and levels used to monitor data are based on strong historical knowledge.

Recommendation Created by Leading Industry Experts

Powerful in field knowledge helps drive specific recommendations to meet your needs.
